American Cockroach

The American cockroach is the largest cockroach found in houses. Females can hatch up to 150 offspring per year. Cockroaches don't get their wings until they become adults.

Size: 2"

Shape: Oval

Color: Reddish brown, with a yellowish figure eight pattern on the back of their head

Common Name: American Cockroach

Kingdom: Animalia

Phylum: Arthropoda

Species: *Periplaneta americana*

Legs: 6

Wings: Yes

Antenna: Yes

Class: Insecta

Order: Dictyoptera

Family: Blattidae

DIET: American cockroaches will eat just about anything, including plants and other insects.

HABITAT: American cockroaches live in warm, dark, wet places, because they need to be near water. They are often found in sewers and basements, around pipes and drains.

IMPACT: Cockroaches crawl through dirty areas and then walk around our homes tracking in lots of bacteria and germs. They can **contaminate** food by shedding their skins. Their cast off skin and waste by-products are **allergens** that can trigger **allergic reactions**, **asthma** and other illnesses, especially in children.

PREVENTION: Keep cooking, eating and food storage areas clean and dry. If you see cockroaches, it is best to call a pest management professional due to the illnesses they can spread.

Brown-banded Cockroach

Brown banded cockroaches get their name from the two light bands they have across their dark brownish bodies. The male's wings are larger than the female's wings. Brown banded cockroaches often hide their eggs in or under furniture. They usually live 5-6 ½ months.

Size: 1/2"

Shape: Oval

Color: Brown, with light bands of color across wings

Common Name: Brown-banded cockroach

Kingdom: Animalia

Phylum: Arthropoda

Species: Supella longipalpa

Legs: 6

Wings: Yes

Antenna: Yes

Class: Insecta

Order: Dictyoptera

Family: Blattellidae

DIET: Brown-banded cockroaches prefer to eat starchy foods, such as wallpaper paste and book bindings. Sometimes they'll eat non-organic things, like nylon stockings!

HABITAT: Brown-banded cockroaches prefer warmer, drier, and higher locations than most cockroaches. While most cockroaches prefer to live in kitchens and pantries, Brown-banded cockroaches will live in any room in the house. They do not need much moisture and avoid light whenever the can.

IMPACT: Cockroaches crawl through dirty areas and then walk around our homes tracking in lots of bacteria and germs. They can **contaminate** food by shedding their skins. Their cast off skin and waste by-products are **allergens** that can trigger **allergic reactions**, **asthma** and other illnesses, especially in children.

PREVENTION: Keep cooking, eating and food storage areas clean and dry. If you see cockroaches, it is best to call a pest management professional due to the illnesses they can spread.

German Cockroach

German cockroaches can be found all over the world. They are the most common cockroach in the United States. Each German cockroach can live about 100-200 days.

Size: 1/2" to 5/8"

Shape: Oval

Color: Brown to Dark Brown

Common Name: German Cockroach

Legs: 6

Wings: Yes

Antenna: Yes

Class: Insecta

Kingdom: Animalia
Phylum: Arthropoda
Species: Blattella germanica

Order: Blattodea
Family: Blattellidae

DIET: Cockroaches are attracted to sweet and floury foods. They also eat non-**organic** items such as toothpaste and books!

HABITAT: German cockroaches live in warm and damp places, like kitchens, bathrooms, and places where people eat and drink.

IMPACT: Cockroaches crawl through dirty areas and then walk around our homes tracking in lots of bacteria and germs. They can **contaminate** food by shedding their skins. Their cast off skin and waste by-products are **allergens** that can trigger **allergic reactions**, **asthma** and other illnesses, especially in children.

PREVENTION: Keep cooking, eating and food storage areas clean and dry. If you see cockroaches, it is best to call a pest management professional due to the illnesses they can spread.

Oriental Cockroach

Oriental Cockroaches probably get their names from trade ships but they are actually from Africa. They are large and very dark compared to other cockroaches. They usually travel through sewer pipes and drains. They prefer dirty places and cooler temperatures than other cockroaches. An Oriental cockroach creates a strong smell and is considered one of the dirtiest of all the cockroaches.

Size: 1"
Shape: Oval
Color: Dark brown, almost black
Common Name: Oriental Cockroach
Kingdom: Animalia
Phylum: Arthropoda
Species: Blatta orientalis

Legs: 6
Wings: No
Antenna: Yes
Class: Insecta
Order: Dictyoptera
Family: Blattadae

DIET: Oriental cockroaches feed on all types of garbage and other organic material.

HABITAT: Oriental cockroaches also live in sewers and wet, decaying areas, such as basements and crawlspaces, firewood and piles of leaves.

IMPACT: Cockroaches crawl through dirty areas and then walk around our homes tracking in lots of bacteria and germs. They can **contaminate** food by shedding their skins. Their cast off skin and waste by-products are **allergens** that can trigger **allergic reactions**, **asthma** and other illnesses, especially in children.

PREVENTION: Keep your home clean and dry. Vacuum often and seal cracks in and around your house. If you see cockroaches, it is best to call a pest management professional due to the illnesses they can spread.
